

Our goal is to protect the environment and make sustainability an easy choice for our customers.

We will ensure that our approach to environmental sustainability is in line with the key requirements of the ISO14001 environmental management system. We are therefore committed to regularly assessing our environmental impact and making further improvements by setting objectives and targets.

We are also committed to preventing pollution and complying with all legal obligations on environmental matters.

We are committed to supporting international efforts on sustainability, including the European Union's Sustainable Development Goals.

We will address key environmental impacts by:

- Reducing carbon emissions in line with climatology.
- Promoting the reuse and recycling of materials and the withdrawal of single-use plastics.
- Minimizing waste and moving towards zero waste sent to landfill in our own operations.
- Promoting innovation and circular economy solutions to address the growing scarcity of resources

We will regularly monitor our sustainability performance and seek external assurance of our annual sustainability data. We will report progress to external stakeholders, taking into account reporting standards and guidelines, such as the Global Reporting Initiative.
